

ECON 8200-005: TOPICS IN MACROECONOMIC THEORY

FALL 2022

UNIVERSITY OF PENNSYLVANIA

Instructor: Alessandro Dovis

Office: PCPE 537

Email: adovis@upenn.edu

Lectures: Monday 5:15-8:15 PM

Office Hours: by appointment.

Course description This class will cover topics at the intersection between macroeconomics and international finance. Applications will include: endogenously incomplete markets and the optimality (or not) of government interventions, positive and normative model of government debt determination, exchange rates and theory of optimal currency areas, monetary policy and risk premia. On the methodological side, we will study how to use tools from dynamic game theory and mechanism design to analyze optimal policy when the government lacks commitment and optimal markets arrangements with lack of commitment and private information.

An important reference for the class is RMT4: Ljungqvist, Lars, and Thomas J. Sargent. Recursive macroeconomic theory. MIT press, 2018.

Expectations I will regularly assign you problem sets and there would be a take home exam at the end of the class. Some of you will be asked to present the solutions of the problem set to the class. I expect you to actively participate in class.

Topics I will tentatively cover (a subset of) the following topics, in particular papers with a “*”:

1. Optimal taxation with and without commitment

Positive and normative model of government debt determination:
